

The Galaxy key colour range

Please note: Colours shown are illustrative only. Actual colours may vary.

Sturdy colour-coded impression-resistant keys

- Distinctively designed Galaxy operational keys are available in 21 colours.
- Keys carry authorised Galaxy Dealer details for easy reference and identification.
- If a master key is lost only the master key and code bars need to be replaced, not the entire range of keys within the system.
- Authorisation is required for additional keys. All keys are cut from code and not duplicated, and the key code is difficult to read from the key.
- Galaxy key strength exceeds Australian Standard. As they are made from stainless steel, keys offer increased wear resistance and the shorter design offers increased strength.
- Cylinder and keys have been cycle tested to 700,000 cycles and with regular maintenance, in excess of 1,000,000.
- Galaxy offers a life-time guarantee on keys.
